Connecting Art, Science & Society for Water Protection

PartArt4OW is funding 19 participatory art initiatives (PAIs) that merge art, science, and citizen participation to protect our oceans, rivers, and lakes. PAIs will be supported by an Accelerator Program including training, mentorship and networking, to get exposure across Europe

Why Art? Why Water?

Water shapes life, cultures, and communities. Art has the power to transform perspectives, evoke emotions, and inspire change. PartArt4OW brings these forces together, using creativity as a tool to deepen our connection with water and drive meaningful environmental engagement.

Sharing Knowledge & Building the Future

Beyond supporting projects, PartArt4OW will develop a toolkit of best practices, methodologies, and lessons learned to inspire future collaborations. By fostering dialogue between diverse sectors, we aim to shape policies, inform funding decisions, and strengthen the role of art in environmental action.

The Sailing Lab

A sailing vessel transformed into a mobile laboratory and creative hub, enables hands-on research, artistic experimentation, and public engagement directly on the water. Artists, scientists, and local communities come together to explore the deep connections between society and water.
